

Client : Jordan Armed Forces / Royal Jordanian Air Force, Royal Maintenance Cor.

Project: Upgrade and Automation of varies Test Bench.

Technology Integration enjoys a strong relationship with a lot of the branches of the Jordanian Armed Forces. The relationship started over ten years ago and covered numbers projects.

The first project involved the automation and upgrade of a waste water treatment facility at the Al-Hussein Main Workshops.

The facility treats waste water from multiple workshops that are located inside the main workshop.

Work for the Royal Jordanian Air force included the upgrade and computerization of over three main test benches, and over six smaller setups.

The first test bench is the METS Test Bench, used for the testing of over three jet engines.

The last test bench concluded in 2007 includes the complete computerization of the old Mirage Jet Engine Test Bench.
